

Hot dip Galvanized Q235 Steel Ringlock Scaffolding for Architecture Construction

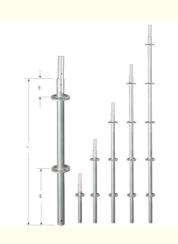

Basic Information

- Place of Origin:
- Brand Name:
- Certification: SGS
- Model Number: BM202

China

Bythai

- Minimum Order 1000 Quantity:
- Price: 8.5-85.5
- Packaging Details: container
- Delivery Time: 10-15
- Payment Terms: TT/TC

Product Specification

Surface Treatment:	Hot-dip Galvanized
Product Name:	Ringlock System
Material:	Q235 Steel
Warranty:	2 Years
Application Scenarios:	Architecture
Shipping Origin:	China
Highlight:	Architecture Q235 ringlock s

Product Description:

Product Overview: Ringlock System Scaffolding

The Ringlock System Scaffolding, also known as ring lock type scaffold, is a modular scaffolding system made of high-strength Q235 steel. It is designed for use in architecture and is widely used in construction projects all over the world.

This system is known for its versatility, easy installation and safe and efficient performance. It is a popular choice among contractors and builders due to its durability and cost-effectiveness.

Surface Treatment: Hot-dip Galvanized

The Ringlock System Scaffolding is hot-dip galvanized, which means it is coated with a layer of zinc to prevent rusting and corrosion. This surface treatment ensures the scaffolding can withstand harsh weather conditions and last for a long time, making it a reliable choice for outdoor projects.

Shipping Origin: China

Our Ringlock System Scaffolding is manufactured in China, where we have a strict quality control process in place to ensure the highest standards are met. We use the finest materials and advanced technology to produce scaffolding that meets international safety and quality standards.

Application Scenarios: Architecture

The Ringlock System Scaffolding is specifically designed for use in architecture. It is suitable for a wide range of construction projects, including high-rise buildings, bridges, tunnels, and more. Its modular design allows for easy adaptation to different architectural designs and layouts.

Material: Q235 Steel

The Ringlock System Scaffolding is made of Q235 steel, a type of high-strength steel known for its excellent strength, durability, and corrosion resistance. This material is also lightweight, making it easier to transport and set up on site. Key Features

Ringlock Scaffolding: The unique ringlock design of this system allows for easy and secure connection between different components, providing a strong and stable structure for workers to perform their tasks on.

Quality Scaffold Connector: The connectors used in our Ringlock System Scaffolding are made of high-quality materials and have been rigorously tested to ensure they can withstand heavy loads and frequent use.

Modular Scaffolding: The modular design of this system allows for quick assembly and disassembly, making it easy to transport and set up on different job sites.

High-Strength Steel: The Q235 steel used in our scaffolding is known for its high tensile strength, making it a safe and reliable choice for construction projects of all sizes.

Easy Installation: With its simple design and easy-to-use components, the Ringlock System Scaffolding can be set up in a fraction of the time compared to traditional scaffolding systems.

Safe and Efficient: Our scaffolding is designed with safety in mind, providing a stable and secure platform for workers to perform their tasks on. Its efficient design also helps to increase productivity and reduce construction time.

Versatile: The Ringlock System Scaffolding can be used for a variety of applications, making it a versatile choice for contractors and builders. It can be used for both interior and exterior projects, and its modular design allows for customization to fit different job requirements.

Investing in our Ringlock System Scaffolding means investing in a reliable, durable, and versatile scaffolding system that will help you complete your construction projects safely and efficiently. Contact us today to learn more and get a quote for your next project.

Product Name: Ringlock System

The Ringlock System Scaffolding, also known as the Corrosion-Resistant Ringlock, is a highly versatile and durable scaffolding system that is suitable for various construction projects. Developed and produced by Bythai, a leading manufacturer in China, this product is designed to provide a safe and easy to assemble solution for all your scaffolding needs.

The Ringlock System Scaffolding is made of high-quality Q235 steel material and is hot-dip galvanized, ensuring its durability and corrosion resistance. It is certified by SGS, guaranteeing its quality and safety standards. With a load capacity of up to 30 tons, this scaffolding system is suitable for both light and heavy-duty construction projects.

One of the key features of the Ringlock System Scaffolding is its versatility. It can be used for a wide range of applications, including building construction, bridge construction, shipbuilding, and even events and concerts. Its adjustable components allow for easy customization to fit any type of structure or terrain, making it a popular choice among contractors and builders.

The Ringlock System Scaffolding is also known for its ease of assembly. Its unique ring lock type design allows for quick and easy installation, reducing the labor and time required for scaffolding setup. This not only increases efficiency but also lowers overall project costs.

With a 2-year warranty, you can trust that the Ringlock System Scaffolding will last through multiple construction projects. Its hot-dip galvanized surface treatment ensures its resistance to corrosion, making it a long-lasting investment for any construction company. Whether you are working on a small-scale residential project or a large-scale industrial construction, the Ringlock System Scaffolding is the perfect solution for all your scaffolding needs. With its high load capacity, versatility, and durability, it is a reliable and cost-effective choice for any construction site. Choose Bythai's Ringlock System Scaffolding for a safe and efficient scaffolding solution.

Packing and Shipping:

Ringlock System Scaffolding Packaging and Shipping

The Ringlock System Scaffolding is carefully packaged to ensure safe and secure transportation. Packaging

The scaffolding components are first wrapped in protective materials to prevent any damage during transit. They are then placed in sturdy wooden crates or metal boxes to further protect them from any potential impact.

Each package is labeled with the product name, quantity, and destination address to ensure easy identification and tracking. Shipping

For domestic shipping, we use reliable transportation companies to deliver the scaffolding to your desired location. We also offer the option of international shipping for our customers located outside of our domestic market.

All packages are loaded into shipping containers and secured with straps and locks to prevent any movement during transit. Our team conducts thorough quality checks before loading the containers onto the transportation vehicle.

Once the scaffolding reaches its destination, our team will assist with unloading and unpacking the components. We also provide installation services to ensure proper assembly and usage of the scaffolding.

With our careful packaging and shipping process, you can trust that your Ringlock System Scaffolding will arrive safely and ready for use.
