

Hot-dip Galvanized Ringlock System Scaffolding for Architecture Aluminum Scaffold Ringlock Scaffolding System

Our Product Introduction

for more products please visit us on bythaiscaffold.com

Basic Information

- Place of Origin: Tianjin China
- Brand Name: Bythai
- Certification: SGS ISO
- Model Number: BT203
- Minimum Order Quantity: 1000
- Price: 10.8-85.5
- Packaging Details: In bundles
- Delivery Time: 10-15
- Payment Terms: TT/TC

Product Specification

- Warranty: 2 Years
- Design Style: Industrial
- Product Name: Ringlock System
- Surface Treatment: Hot-dip Galvanized
- Shipping Origin: China
- Material: Q235 Steel
- Application Scenarios: Architecture
- Highlight: **Architecture Ringlock System Scaffolding, Hot dip Galvanized Ringlock System Scaffolding, Aluminum Ringlock System Scaffolding**

Product Description

Product Description:

The Ringlock System Scaffolding, a state-of-the-art scaffold coupler system, is a revolutionary product designed with industrial efficiency and robust construction in mind. Industrial facilities, and various large-scale projects. Comprised of high-grade Q235 steel, the Ringlock system ensures durability, stability, and a long service life, making it a reliable solution for your construction needs.

This scaffold system is treated with a hot-dip galvanized surface treatment process, which imparts superior corrosion resistance and a sleek finish to each component. This hot-dip galvanized ringlock is not merely functional but also maintains its integrity over time, even in the harshest of environments. The process involves the steel being submerged in molten zinc, creating a metallurgically bonded alloy coating that is exceptionally resistant to mechanical damage. The result is a resilient and maintenance-free surface that significantly extends the lifespan of the scaffolding system.

What sets the Ringlock System Scaffolding apart is its ingeniously simple and reliable ring nodes, from which up to eight connections can be made at various angles. The nodes are precision engineered for easy assembly, ensuring that the scaffold coupler system can be erected, adapted, and dismantled quickly, saving both time and labor costs. The system is highly versatile, making it suitable for a broad range of applications, from straightforward structures to complex geometries, adapting to various terrains and architectural designs.

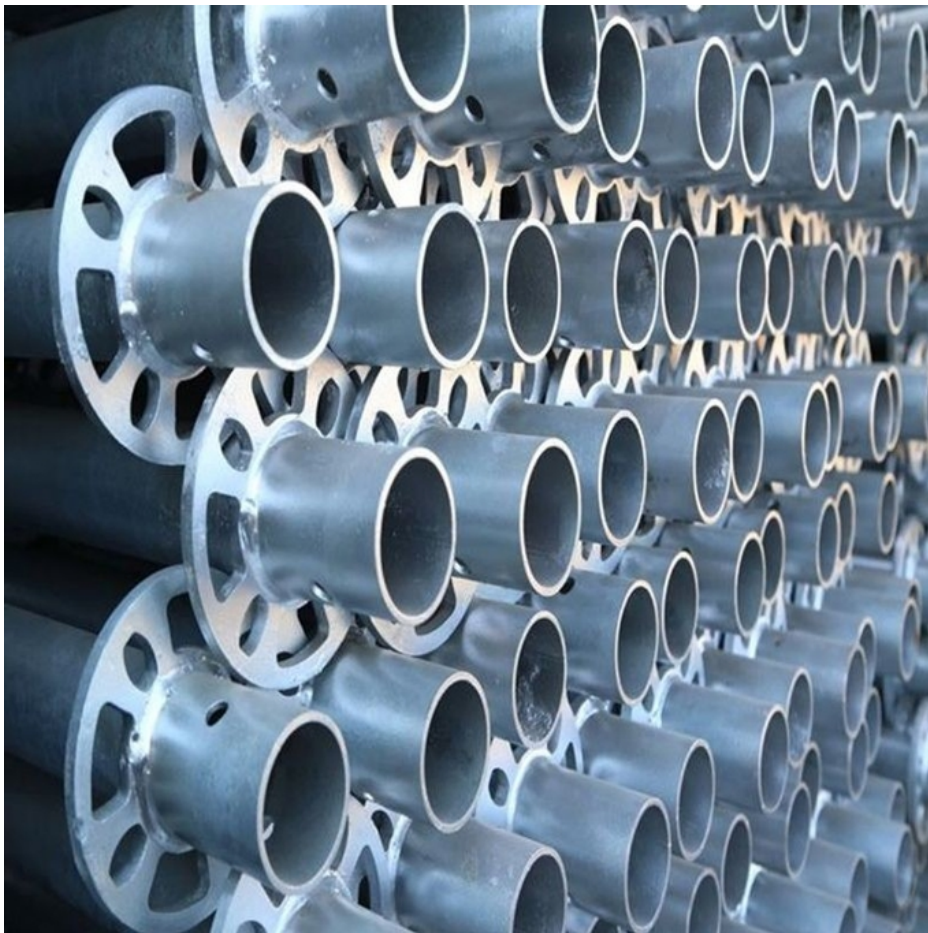

The Soporte Diagonal Ringlock, or the Ringlock diagonal brace, is a critical component of the system. It provides additional lateral support to the scaffold, enhancing the overall structural integrity and ensuring a safe working platform. The braces are also made of Q235 steel and are hot-dip galvanized, sharing the same durability and quality as the rest of the system. They are designed for effortless connection to the ring nodes, which allows for a seamless and secure fit, contributing to the system's overall stability and safety.

Adhering to stringent quality control measures, the Ringlock System Scaffolding comes with a solid warranty of 2 years, ensuring that clients can trust in the reliability and performance of the product. This commitment to quality guarantees that the system you invest in is not only robust and efficient but also backed by the manufacturer's assurance of excellence.

In summary, the Ringlock System Scaffolding is a cutting-edge scaffold coupler system that embodies the industrial design style with its robust Q235 steel construction, hot-dip galvanized surface treatment, and versatile configuration capabilities. Manufactured in Tianjin, China, it provides a dependable, safe, and efficient solution for any construction or industrial project. The system's ease of assembly, combined with the strength of the Soporte Diagonal Ringlock, ensures that it meets the dynamic needs of the industry while providing a warranty that underscores its quality and durability. Choose the Ringlock System Scaffolding for a superior scaffold solution that stands the test of time and environment.

Technical Parameters:

Attribute	Detail
Design Style	Industrial
Warranty	2 Years
Material	Q235 Steel
Place of Origin	Tianjin, China
Product Name	Ringlock System
Surface Treatment	Hot-dip Galvanized
Application Scenarios	Architecture
Application	Building
Shipping Origin	China
